

# Analytics for Healthcare

*Improve care, reduce costs and make better decisions with performance management*

## Abstract

The global healthcare industry is at a crisis point. Escalating costs, inconsistent quality, a critical shortage of skilled workers and an increasing demand for services are causing both providers and payers of care to look for innovative ways to increase operating margins, reduce costs and improve quality and safety—while increasing access to care.

Today's financial climate has sparked an even broader range of new challenges for healthcare organizations, forcing many institutions to operate in a bunker mode, with management tempted to keep doing what had worked in the past—in the hope that it will continue to work in the future.

Given the current economy, if there were ever a time for the healthcare industry to adopt performance management principles, processes and technologies, that time is now. This paper will discuss how healthcare institutions can leverage performance management capabilities to reduce costs, improve care quality and promote access and transparency while driving toward sustainable and profitable growth for the organization.

## Overview

Both experience and history show that giving into the temptation to rely on the status quo can be a fatal mistake. However, staying ahead for healthcare organizations isn't easy. Data pours in from multiple systems, facilities and service lines. And IT departments are challenged to provide solutions that enable productivity and agility, despite tight budgets. Manual processes, inefficiencies and lack of accountability add to the mix.

IBM Business Analytics performance management solutions—including Cognos® and SPSS® software—can help your organization rise to the challenge with better insight, planning and performance. Our solutions do this by unlocking data captured in multiple applications and transforming it into useful, relevant information.

With business intelligence (BI) and performance management capabilities you can understand what's behind critical issues, trends and opportunities. You can gain an accurate, forward-looking view of operational performance and can plan accordingly while promoting collaboration. With healthcare performance management, your organization gains a complete and consistent view of all key profitability drivers so you can:

- Track and monitor revenues, margins and operational performance
- Analyze results, identify trends, detect patterns and predict outcomes
- Model the impact of business decisions and improve financial processes
- Monitor quality initiatives and care programs
- Support pay for performance goals and initiatives
- Gain an enterprise-wide view of performance against organizational goals, key performance indicators (KPIs) and strategic objectives
- Quickly adjust plans to meet financial objectives and support profitable growth

Organizations across the healthcare continuum rely on IBM Business Analytics performance management solutions to identify and leverage core competencies, exploit competitive positions, promote productivity and constantly improve, measure and monitor quality.

IBM Business Analytics software delivers complete, consistent and accurate information that healthcare decision-makers trust to improve performance. Combined with rich industry solutions, proven practices and professional services, healthcare organizations can leverage IBM Business Analytics to drive the highest IT productivity and deliver better results. With IBM Business Analytics offerings, including Cognos and SPSS software, healthcare organizations can implement a complete framework or pick and choose the products that best suit their requirements, budgets or existing systems.

## What is healthcare performance management?

To stay ahead in a competitive marketplace, you need to spot trends and make informed decisions quickly. With performance management, healthcare organizations gain access to reliable, timely information that drives better decisions. While there are numerous decisions to make, all decisions depend on answers to the following fundamental questions:

- **What is happening?** – A gauge of the most critical indicators for your organization
- **Why is it happening?** – The ability to dig deeper into current issues to understand what led to the results
- **What should we be doing?** – The ability to set plans, allocate resources, monitor them and adapt
- **What is likely to happen in the future?** – Being able to monitor and analyze current and past performance to proactively address evolving trends and predict outcomes

IBM provides a performance management framework that allows healthcare organizations to measure and monitor performance, plan for the future and provide service-line directors and financial administrators with reporting and analysis that enhances clinical care processes and business operations. Cognos software provides a single, enterprise platform for healthcare performance management. It integrates and leverages your myriad of data sources and allows your organization to employ the following capabilities to answer these critical business questions:

### Measuring and monitoring

Cognos software communicates your strategy and objectives through metrics-based scorecards and dashboards. It answers “What is happening?” by providing service-line directors and staff with the information they need to take ownership of their performance—by providing visibility into strategy, enabling an understanding of the part they play in making the strategy succeed and presenting the metrics to measure their success. By enabling the strategic alignment of objectives against performance metrics, you can answer at any time the key question: Are we making progress on the things that must be done?

Healthcare organizations utilize Cognos scorecarding and dashboards to:

- Monitor revenues and margin performance by service line, by department, by facility and at the enterprise level
- Measure performance against strategic institutional initiatives
- Monitor quality across multiple locations and service lines
- Track financial goals in terms of growth, profitability, key controllable expenses and return on net assets
- Aggregate profitability and operational data from multiple silos across the organization to deliver dashboards and scorecards to care providers and management

Like any other strategic initiative, performance management initiatives and utilization of dashboards and scorecards are most successful when coupled with the strategic vision and endorsement from the organization’s executive team. Cognos software supports the development of a collaborative environment, promotes accountability through aligned performance metrics and enables healthcare organizations to make better decisions about their business: from operations and quality, to service line management, resource planning, capital expenditure planning and strategic initiatives.

### Budgeting and planning

Many healthcare organizations still use spreadsheets as their primary vehicle for planning and budgeting. Spreadsheet-based systems create islands of financial and planning data, where everyone works independently. What's required instead is a solution that replaces a fragmented process with continuous, collaborative planning that supports improved quality of care and delivers up-to-date insight into operational performance. Cognos software helps you build a foundation for higher performance by connecting strategy to plans, expense targets, revenue objectives and operational objectives.

Planning capabilities address “What should we be doing?” and “What is likely to happen in the future?” by allowing you to set strategic goals and turn them into discrete plans and budgets for the entire enterprise. Plans can be built to maximize operational effectiveness, and they can be easily realigned as conditions change. Healthcare organizations use Cognos software to:

- Develop long-range, financial, cost center and headcount plans, forecasts and budgets
- Create driver-based models for expense planning based upon patient days, visits, units of service, procedures and more
- Create operational plans for facilities, clinics and service lines
- Plan for adjustments based on projected demographic and/or environmental influences (e.g. market competition, changes in referral patterns, changes in reimbursement rates, etc.) that impact volume and dollar projections

- Gain consensus and consolidate top-down and bottom-up operational plans with financial plans
- Increase accountability across the organization through a high-participation planning process
- Support timely updates of forecasts to address changing market influences, new initiatives and competitive factors
- Manage and consolidate plans via integrated workflows

With integrated plans, BI reporting and analysis, and performance metrics, you can dramatically improve your understanding of the organization. And this improves your ability to make timely and informed decisions that improve operations, increase revenues and drive profitable growth.

### Deliver better growth and insight

Ask most healthcare executives and service line directors about their key strategies for growth, and the same answers tend to pop up: increase market share, improve patient satisfaction and loyalty, serve patients cost-effectively, improve the quality of care and understand the need of the patient community so the institution can offer the right services at the right time. This is amidst a consumer community that is more savvy and price sensitive than ever before, and far less loyal.

Adopting a service line strategy is predicated on accessing consumer information, using it to understand the behaviors and profitability of medical services and then creating strategies and plans that optimize the quality of care and maximize the institution's success.

The tools to perform these tasks have existed for years, but in most cases, these technologies have failed to recognize the central issue. The data required for complete analysis resides in disparate systems, some within older legacy applications, all of which exist in relative isolation from the financial planning process.

Spreadsheets consequently rely on disparate islands of information, and they are time-consuming to create and maintain. Enterprise resource planning (ERP) applications have been cost-prohibitive and have rarely lived up to their promise, and initiative planning and tracking has been an afterthought. Consequently, many healthcare institutions have failed to meet their growth and profitability targets.

With Cognos software, healthcare institutions can aggregate referral data, better understand market segments and set and monitor specific targets that improve profitability:

- Service line and departmental reporting, analysis, dashboards and scorecards let service-line directors and operational staff see at a glance how individual clinics, ambulatory centers, departments and/or service lines are performing
- Marketing departments can identify service areas to target to more efficiently serve the community and enhance operational performance
- Initiative planning lets you perform what-if analysis and plan marketing initiatives by service, by specialty, by market or by practice
- Service line P&L calculation and forecasting can be created dynamically from revenue, balance sheet and cost information to provide profitability insights

With IBM Business Analytics solutions, healthcare organizations can tap into vast amounts of utilization data and create real intelligence on consumer behavior, referral sources, revenue streams and profitability by service lines or patient care facilities. They can also empower internal analysts to report on and analyze profitability by service area and patient demographics. Healthcare enterprises can more effectively plan outreach and marketing initiatives and monitor their success to feed information gained back into the process, creating a closed-loop cycle for continual performance improvement.

### Increase operational efficiency

Despite the tendency to retrench in a challenging economy, healthcare organizations cannot afford to stand still and wait for the storm clouds to pass them by. Analysts have time and again stated that the institutions that will survive are the disruptors—the ones who treat information as a strategic asset and know how to use it effectively. These disruptors will unite data, share information widely and analyze it rigorously to find new competitive advantage and squeeze out new efficiencies from the organization.

Healthcare providers must respond to economic challenges by shoring up internal operations to ensure that the entire organization is running at peak efficiency. Making this determination, however, requires an in-depth understanding of how well the organization is operating relative to its historical trends, its peers and the overall market. To gain this insight, your institution needs the ability to connect operational details to business drivers.

Scorecarding for example, is a great application for finding new efficiencies. With scorecards, healthcare organizations can distil information into a small number of metrics and targets to:

- **Deliver at-a-glance information** – Stop sifting through a stack of reports to find what's right... or wrong by using scorecards that show you immediately how the organization performs against targets you set
- **Communicate strategy and targets** – Metrics show everyone what's important, what's expected and how you're doing
- **Increase accountability** – Let care providers and operations personnel see the strategy and understand their part in making the strategy succeed, and give them metrics to measure their success
- **Connect departments** – Scorecard metrics, like your strategy, are interdependent; show medical, ancillary and administrative staff how their performance affects others

Department	Metric Name	Actual	Target	Variance	Variance %	Time Period
Financial	Net Income	30.36	30.30	0.06	1.97%	04/01/08
	Operating Income	5.10	5.20	-0.10	-1.92%	04/01/08
	EBITDA	40.70	39.30	1.40	3.56%	04/01/08
	EBIT	4.75	5.20	-0.45	-8.65%	04/01/08
Inpatient Business	Inpatient Admissions	38.83	38.80	0.03	0.08%	04/01/08
	Outpatient Admissions	1.10	1.20	-0.10	-8.33%	04/01/08
	Emergency Admissions	34.82	35.30	-0.48	-1.36%	04/01/08
	Other Admissions	4.90	5.20	-0.30	-5.77%	04/01/08
Quality Outcomes & Safety	30-Day Mortality	29.24	29.30	-0.06	-0.20%	04/01/08
	30-Day Readmission	1.24	1.20	0.04	3.33%	04/01/08
	30-Day Complication					04/01/08
	30-Day Death					04/01/08
Quality Patient Satisfaction	Net Promoter Score	30.36	30.30	0.06	1.97%	04/01/08
	Customer Satisfaction	5.10	5.20	-0.10	-1.92%	04/01/08
	Employee Satisfaction	40.70	39.30	1.40	3.56%	04/01/08
	Supplier Satisfaction	4.75	5.20	-0.45	-8.65%	04/01/08

In addition to the right software to help organizations track efficiencies, IBM also provides the thought leadership and best practices for finding the right metrics to measure. Best practice budgeting, plans, forecasts and financial reporting are also a cornerstone of better performance and efficiency. Becoming a leaner organization means swapping out inefficient processes in favor of new systems capable of driving ongoing performance.

For instance, rather than setting targets at specific numbers, your decision-makers may want to begin tying performance targets to events, trends and risk factors. Rather than engaging in planning on an annual basis, they might consider adopting shorter planning cycles focused on the achievement of specific tactics and initiatives. Rather than measuring performance in absolutes, your business operations users can use critical business ratios to gain a comprehensive overview of organizational efficiency.

By replacing rigid annual budgeting with continuous planning – on a monthly, weekly or even daily basis – Cognos performance management software can position your organization to achieve higher performance in both good times and bad. With real-time visibility into up-to-date data, your decision-makers can create rolling forecasts that take a broad range of potential future scenarios into account.

Using driver-based modeling and predictive analysis, financial managers can model and project changes in reimbursement rates and cash reserves while operations management and service line directors can develop action plans for variable future volumes, increasing operational agility and responsiveness to consumer demand and resource requirements. Performance management with Cognos software:

- Enables healthcare organizations to establish corporate targets and develop integrated, functional, financial and operational plans
- Allows healthcare institutions to do both top-down and bottom-up planning to ensure alignment with strategic objectives
- Provides the ability to automatically cascade drivers from one department to another in order to drive volume, revenue and expenses across every department of the organization
- Manages profitability planning, analysis and reporting by service lines and locations, permitting an extremely high level of precision
- Provides activity-based drivers and rates used for planning and reporting, allowing unsurpassed accuracy, consistency and confidence

### **Leverage predictive analytics**

IBM Business Analytics solutions include SPSS software, which helps healthcare organizations predict future events and proactively act upon that insight to drive better outcomes.

Predictive analytics helps healthcare organizations to anticipate change – so that you can plan and carry out strategies that improve results. By applying predictive analytics solutions to data you already have, your organization can uncover unexpected patterns and associations and develop models to improve clinical and operational performance.

This means you can better serve patients, more accurately predict staffing requirements and develop successful services more efficiently. Predictive analytics gives healthcare organizations the knowledge to predict – and the power to act.

## The power of performance management

IBM Business Analytics performance management solutions turn data into actionable information— information that brings a common understanding and insight into your current performance and supports better decision-making throughout your organization. It provides capabilities to measure and monitor performance, generate timely reports and analyze data to improve operations.

It allows healthcare organizations to display complex analytical information through easy-to-review scorecards and dashboards. This consistent, objective and actionable information supports the quality initiatives and collaboration necessary to transform healthcare organizations. By utilizing the IBM Cognos performance management enterprise framework, health industry organizations can:

- **Reduce costs** – Identify, implement and monitor operational process efficiencies to drive down operating costs
- **Improve care quality** – Optimize and align clinical processes to improve quality, patient safety and clinical outcomes

- **Promote transparency and access** – Provide cost and quality information to purchasers, consumers and regulators to drive accountability, collaboration and equitable access to care
- **Drive sustainable and profitable growth** – Support the organizational mission by ensuring market competitiveness and leveraging capacity and capabilities to expand into new markets, partnerships, products and services

## What sets us apart

IBM is the only vendor that delivers a complete performance management system—a system that is designed not as multiple tools, applications or systems, but as a single performance management enterprise architecture that can meet the needs of all users across the organization. Founded on a purpose-built SOA platform that is open and fits complex environments, our system allows healthcare organizations to leverage existing investments in transactional systems, data sources, application servers, security systems, portals and more. We deliver the full range of capabilities that both executive level and departmental users need to monitor their operations, make better decisions and plan for better business outcomes.

## Summary

Decision-making happens at every level, in every function, in every department and service line of a healthcare organization. Every one of those decisions is based on the information people have on hand, whether that decision is financial, administrative or clinical in nature. If that information is on target and reliable, timely and easy to consume, better decisions result. Information that is inaccessible or incomplete, late or inaccurate has a direct and negative impact on decision-making, and ultimately, on the quality of care delivery and on the efficiency of operational performance.

IBM is playing a critical role during this time in history because we touch more points in healthcare than anyone else—from connecting electronic medical records throughout medical offices, hospitals and pharmacies to improving care and reducing cost to accelerating medical research with deep analytics that discover how well drugs work. IBM has 450,000 reasons to care about healthcare—counting employees, dependents and retirees, IBM spent almost \$1.3B on employee healthcare last year alone.

IBM Business Analytics software is enabling healthcare organizations to react quickly to changing environments, operate more efficiently and continue to pursue growth by helping them gain deeper insight into operations. IBM offers a performance management system that allows healthcare organizations to leverage existing investments from multiple sources, and it delivers the full range of integrated capabilities financial managers, service-line directors and operational users need to monitor performance and make better decisions. When the going gets tough, the tough need insight. That's why leading healthcare organizations turn to IBM.

## About IBM Business Analytics

IBM Business Analytics software delivers complete, consistent and accurate information that decision-makers trust to improve business performance. A comprehensive portfolio of business intelligence, advanced analytics, financial performance and strategy management and analytic applications gives you clear, immediate and actionable insights into current performance and the ability to predict future outcomes. Combined with rich industry solutions, proven practices and professional services, organizations of every size can drive the highest IT productivity and deliver better results.
